

G-Pro Level Sloped profile

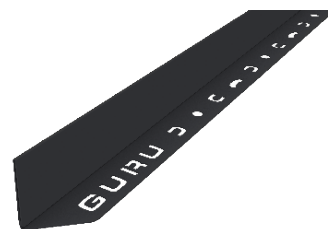

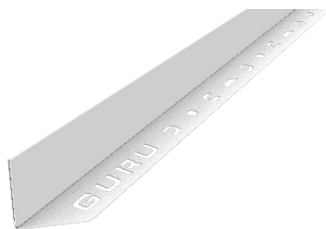

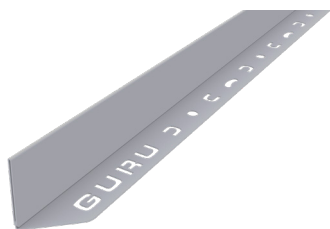

Description

Decorative finishing profiles made of high-quality stainless steel to clad the lateral level difference of the site-built shower. They ensure a constant 2% slope in accordance with the CTE (Spanish Technical Building Code).

Installation section

- The profile maintains a constant 2% slope, allowing installation on surfaces with inclinations between 1.9% and 2.3%.
- In installations with waterproofing systems, it is essential to verify that the slope is within this range in order to avoid possible contact between the profile and the membrane.
- If it is necessary to cut the profile to adjust it to the required length, the edges must be smoothed and burrs removed in order to avoid possible damage to the waterproofing membrane.
